

SKIBICKI

... The Quality

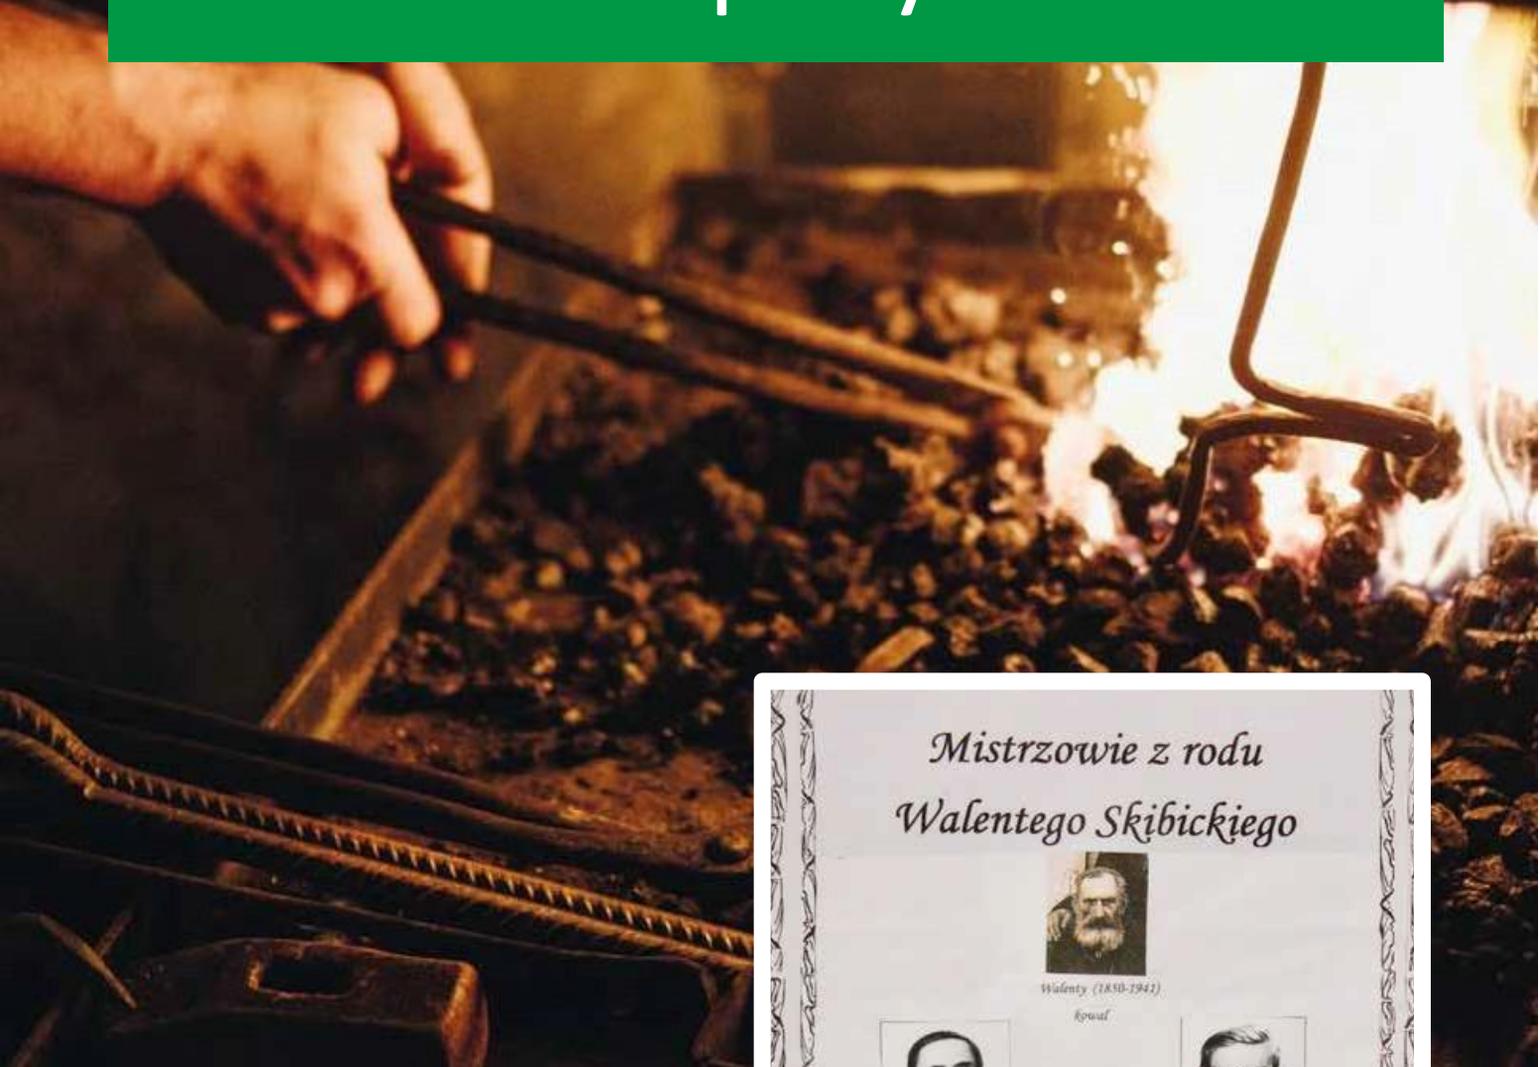

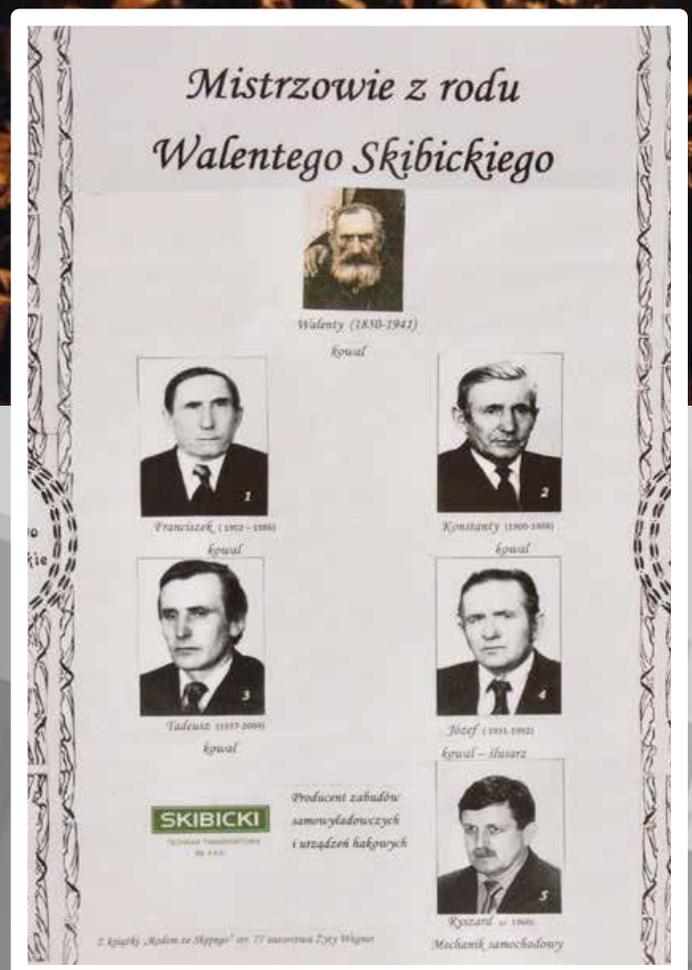

SKIBICKI

.... The Quality

The Roots of Skibicki Company

The love for metal and the talent for its processing is deeply imprinted in the genes. Experience is gained over generations. The traditions of the SKIBICKI family have always been associated with vehicle construction and metalworking. The doyen of the family - WALENTY was a respected blacksmith, his children, and grandchildren, especially RYSZARD SKIBICKI, developed family traditions by creating a thriving company - a leader of the truck body building industry.

The History of The Company

The SKIBICKI company is a national leader in the production of truck bodies. Our brand is a guarantee not only of quality and solid workmanship, but also business reliability, which makes us a stable and predictable partner. Specialist knowledge, innovative approach, high safety standards and many years of experience in project implementation makes the SKIBICKI brand a trusted and reliable partner in the field of truck construction and production of hooklift devices. We are taking an active part in the revolution that we observe in all branches of the economy, because without our devices the implementation of the most daring and progressive projects will be impossible. Sustainability is no longer just a trend, but an obligation for every large company.

The SKIBICKI brand was established in 1981. The Company growth was rapid, to take today's shape on only a few years, however, before it was built by three generations of craftsmen.

Ryszard Skibicki registered his own company in 1982. It was an extremely brave step – Martial law was in force in the country, and it was extremely difficult to run a free business activity. The surroundings of the forge and workshops marked the beginning of the history of the brand bearing his name. Earlier, in the same forge and in the same workshops, his great-grandfather (who returned from the Prussian army in 1880 and founded the forge), grandfather Konstanty in 1920, after returning from the war - "was a Pilsudian", continued the work of running the forge and father Józef, who in 1952 started his business producing horse-drawn carts with rubber wheels. Thanks to the activities of representatives of four generations, the name Skibicki has become a symbol of reliability and quality. Young Ryszard Skibicki grew up amidst the blows of a hammer against an anvil, the heat of workshop furnaces and the atmosphere of hard, reliable work. Already as a boy, and then a young man interested in the world, he gained experience in the metal industry. When he decided to register the company - in fact he formalized the activity, which he continued in the footsteps of his great-grandfather, grandfather and father.

The turning point in the development of the SKIBICKI brand was the design of the first body for the Star 200 truck by Ryszard Skibicki. The product was sold at the local market, where it received a price twice as high as expected. From that moment it was clear that Ryszard Skibicki's experience and his outstanding knowledge of the industry secrets would make him successful. The Tipper had great interest in the industry - soon queues formed for trucks with the Skibicki TIPPER, and the SKIBICKI brand began to be known throughout the country. Another breakthrough in the history of the brand was the installation of the first hooklift device in 2002. Its premiere again reverberated widely in the industry and the municipal services market and transport. Proposed by Ryszard Skibicki model significantly outperformed all other products in its category.

Today, Ryszard Skibicki - an experienced constructor and industry expert - focuses on the company's development. The number of orders and interest in the products made it necessary to create a professional base in the form of a design office. As a result, the product range is systematically expanding, and the company benefits from the position of the industry leader, which continues to invest in development and competitiveness.

HOOKLIFTS

SKIBICKI is a legendary Polish brand of hooklift devices, which for over 40 years has been gathering knowledge about the production of hooklift devices

Each of SKIBICKI hooklift device is designed with high strength, simple operation and long life in mind. Every stage of production is carried out with full commitment and attention to every single detail.

HOOKLIFTS

HookLift Model HKS 30

Lifting Capacity: 30 T

Maximum length of transported containers: 7000 mm

Hook height: H= 1570 mm, standard DIN 30722

Steel type S355 PN-EN 10025

HookLift Model HKS 5

Lifting Capacity: 5 T

Maximum length of transported containers: 5000 mm

Hook height: H= 900-1200 mm, standard KP or DIN 30722

Steel type S355 PN-EN 10025

HookLift Model HKS 20

Lifting Capacity: 20 T

Maximum length of transported containers: 7000 mm

Hook height: H= 1450-1570 mm, standard DIN 30722 or SS3021

Steel type S355 PN-EN 10025

TIPPERS

Light tipper body by **SKIBICKI** are intended for 2-axle vehicles with a total weight of up to 18 tons. Light tippers are divided into three categories:

- 3W ultra-light designed for chassis up to 7 tons
- 3W lightweight up to 12 tons
- 3W lightweight up to 18 tons

Thanks to the use of steel in the structure with increased abrasion resistance - **HARDOX** are intended for use in the most difficult conditions. The high tipping and lowering speed is due to the use of hydraulics from world-class producers.

TIPPERS

THREE-WAY TIPPER 3W

Floor length approx. 5000 mm

Floor material: 4-6 mm Hardox 450

Hydraulic cylinder HYVA

Steel structure shot-blasted, painted with primer and surface paint in RAL colour

1W MINING TYPE TIPPER

Floor length approx. 5500 mm

Floor material: 8-15 mm Hardox450

Hydraulic cylinder HYVA

Steel structure shot-blasted, painted with primer and surface paint in RAL color

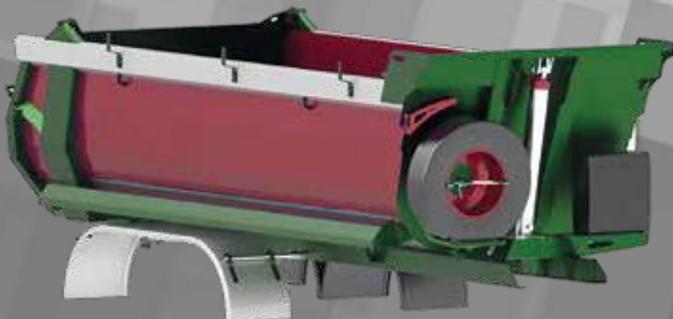

1W REAR TIPPER

Floor length approx. 5300 mm

Floor material: 8-15 mm Hardox450

Hydraulic cylinder HYVA

Steel structure shot-blasted, painted with primer and surface paint in RAL colour

TRAILERS

KP7 TANDEM CONTAINER TRAILER

GVM 12t-16t

The most popular choice of municipal companies

For the transport of KP containers up to 4500 mm in length

Treadmill made of S500 steel,
track length 3800 or 4300 mm

Four-point container locks

TRAILERS

3W THREE-WAY TIPPING

Floor length approx. 5000 mm

Floor material 4-6 mm Hardox450

HYVA cylinder

Shot-blasted steel construction, painted with primer and surface paint in RAL colour

TANDEM CONTAINER TRAILER

GVW 18t

For transporting DIN 30722 containers up to 7000 mm long

Treadmill made of Strenx700 steel, tread length 6600 or 6850 mm

Four-point container locks

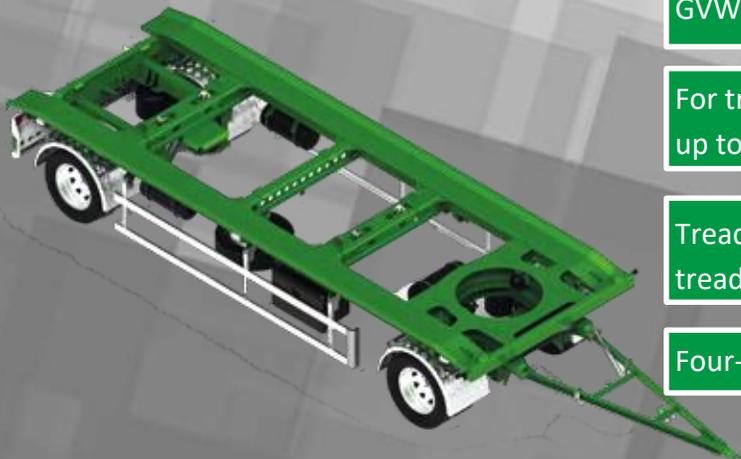

CONTAINER TRAILER

GVW 18t

For transporting DIN 30722 containers up to 7000 mm long

Treadmill made of Strenx700 steel, tread length 6600 or 6850 mm

Four-point container locks

VEHICLES

MULTIFUNCTIONAL

3W tipper + console-mounted crane
- for construction industry

We specialize in configuring a wide range of multifunctional vehicles for specialized applications for the municipal and construction industries. We will help you choose a vehicle that is tailored to your needs.

VEHICLES

MULTIFUNCTIONAL

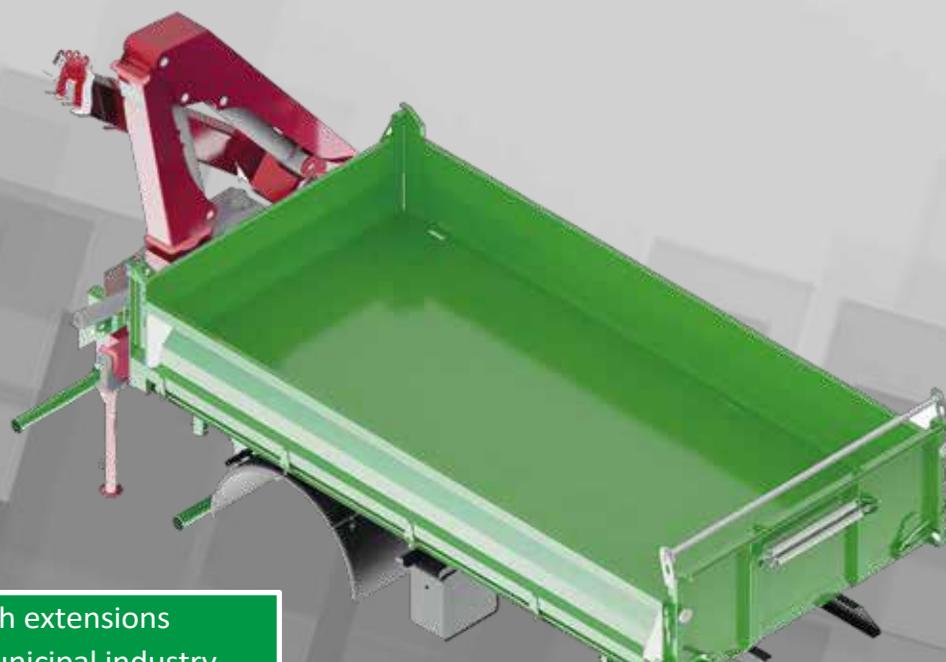

3WBH tipper + crane
- for the construction industry

Hook device + crane
- for the municipal industry

3D tipper with mesh extensions
+ crane - for the municipal industry

INNOVATIONS

We are a company that never stops searching for new solutions. Together with our team, we implement new products after their thorough examination. Our upgraded hooklifts are lighter while maintaining their performance. Lighter machine for higher gross vehicle weight, fewer trips and less fuel consumption. We follow the eco trend in the municipal industry. We also implement new products to the offer, such as our proprietary skip loaders.

Together with the Wrocław University of Technology, we implemented a research program in 2019-2023 financed by NCBIR under the name "Development of new improved hook devices for applications in municipal services" to the total PLN 3,980,625.00
